EAFree Pilot

User guide · version 2.30 · indicator for MetaTrader 5

The bundle holds one file, EAFreePilot_v2.30.ex5. Attach it to one chart only: the cockpit watches the whole radar list by itself.

1. Installation

1. MT5: File → Open Data Folder → MQL5 → Indicators. Copy EAFreePilot_v2.30.ex5 into this folder.
2. Tools → Options → Expert Advisors: tick Allow DLL imports.
3. Navigator window: right-click → Refresh. The file appears under Indicators.
4. Drag EAFree Pilot onto a chart (any timeframe). Tick Allow DLL imports (Common or Dependencies tab, depending on the MT5 build) → OK.
5. Wait a few seconds: the cockpit appears once the account is confirmed (see section 2).

2. Licence

There is no licence key. Your MT5 account number is the licence. The computer needs an Internet connection to check it.

Account type	Allowed?
Demo	Yes, no IB needed, no time limit
Real	Yes, when the account is opened under the EAFree IB (Exness or Vantage)

When the account does not qualify, a licence panel appears in the middle of the chart with the account number and these buttons:

Button	Use it when
Open Exness account	You have no account yet: open a new Exness account under the EAFree IB
Open Vantage account	Open a new Vantage account under the EAFree IB
Already have one? Switch IB	You already have an account: move it under the EAFree IB
Telegram support	You need help

Once the account is open, attach EAFree Pilot to the chart again. Pilot draws nothing until the account qualifies.

3. Settings (Inputs tab)

Only the settings below exist. Everything else is preset.

Group 1 · General

Input	Meaning	Default
Lang	Language (the EN/VI button on the cockpit switches it too)	EN
Symbols	Symbols, comma-separated, e.g. XAUUSD,EURUSD,BTCUSD. A timeframe may follow: XAUUSD:M15. Empty = default list	empty
RiskPct	Risk % per trade, used for the lot suggestion	1.0
DashScale	Cockpit size, 0.8 – 1.6	1.2

Group 2 · Alerts

Input	Meaning	Default
AlertPopup	Pop-up alert in MT5	true
AlertPush	Push to MT5 mobile (needs the MetaQuotes ID in Tools → Options → Notifications)	false
AlertSoundOn	Sound	true

Group 3 · Telegram

Input	Meaning	Default
TgEnable	Send signals to Telegram	false
TgToken	Bot token (from @BotFather)	
TgChatID	Group/channel ID (groups look like -100…)	
TgTopicGold · TgTopicForex · TgTopicCrypto	Topic IDs for gold / forex / crypto when the group uses Topics (0 = General)	0
TgTzOffset · TgTzLabel	Time zone shown in messages (7 / VN = Vietnam)	7 · VN

4. Reading the cockpit

Colours: green = buy / profit, red = sell / loss. Click a tab name or use the key in brackets.

Tab	Shows
FLIGHT (F)	Latest signal and trade plan: entry, SL, TP1/2/3, TODAY strip, recent signals
CTX (X)	Market context: trend across timeframes, session, news, currency strength, spread
SIG (S)	Switch each engine on/off, QUICK SETTINGS, save/load preset, the “blocked” line telling why there is no signal
RADAR (D)	Every watched symbol; click a card to switch the chart to it
NEWS (N)	Economic calendar by impact, 24h timeline, news windows
LOG (L)	Signal statistics, heatmap, HTML report export
HELP (H)	Quick help inside the cockpit

The signal card on FLIGHT

- Direction and entry: BUY or SELL, with the engine that fired it.
- SL, TP1, TP2, TP3: the trade plan; each TP shows its touch odds.
- Q1 – Q5: the signal's quality grade, Q5 is the best.
- P(win): estimated win rate from similar past situations on that same symbol.
- HEADS-UP: price is approaching an area of interest. It is not a signal yet.

How results are counted

- A signal wins once price touches TP1. Its result is the pips of the farthest TP touched.
- SL before TP1 is a loss. Once a TP is touched the signal can no longer count as a loss.

Left dock (key K)

WATCH quotes · SESSIONS 4 sessions + candle timer · MTF 4 frames · ACTIVITY · CHECKLIST + notes · ACCOUNT · ALERTS (alert channels, TEST TG button) · STRENGTH · LEVELS (click to highlight) · CALC forex calculator · SPREAD · CORR · the i ABOUT button.

5. Daily use

- Risk 0.5 – 1 % per trade. Open CALC for the lot suggested from RiskPct and the SL distance.
- Trade the plan shown on FLIGHT. Tick the CHECKLIST before every manual trade.
- No entries inside a news window (red card on NEWS).
- A day without signals is normal. The “blocked” line on the SIG tab tells why.

Connecting Telegram

1. In Telegram, message @BotFather → /newbot → choose a name → get a token like 123456:ABC... Paste it into TgToken.
2. Add the bot to your group or channel as an admin. Get the group ID (it looks like -100...) and paste it into TgChatID.
3. Group with Topics: open a message in the topic → Copy link, e.g. t.me/c/123/5/10 → topic ID = 5; fill TgTopicGold / TgTopicForex / TgTopicCrypto.
4. Set TgEnable = true. In the ALERTS dock pane, click TEST TG: any error is written to the Experts tab.

Keyboard shortcuts

F FLIGHT · X CTX · S SIG · D RADAR · N NEWS · L LOG · H HELP · R REPORT · K dock · M collapse · Esc closes the report. Drag the header to move the cockpit.

6. FAQ

Symptom	What to do
The licence panel shows	The account does not qualify (section 2). Open an account under the EAFree IB or contact support with the account number.
No signal all day	Read the “blocked” line on the SIG tab: choppy market, news nearby, or the signal limit reached. This is normal behaviour.
NEWS tab empty	Needs MT5 online and a broker with the MQL5 calendar. The first load is slow: wait a minute, then refresh.
Telegram does not send	Check Allow DLL imports, the token, the Chat ID (negative for groups), the bot is an admin. Click TEST TG and read the Experts tab.
Text overlaps / too large	Adjust DashScale (0.8 – 1.6). Still wrong: send a screenshot to support.
